Stella Ormandy

Manufacturing Engineering Student

Vancouver, BC | steorm23@gmail.com | +1 778-677-1907 | stellaormandy

Career Objective

Fourth-year Manufacturing Engineering student at UBC seeking a Spring 2027 co-op (available for full 4-month term) with a strong interest in semiconductor technology. Hands-on quality control experience across high-volume production lines, including in-process checks, internal audits, and statistical trend analysis of yield and defect data to drive corrective action. Fast learner who thrives on hands-on design and hardware development, backed by strong CAD, MATLAB, FEA, and Excel skills. Experience presenting findings to operators and engineers and an effective communicator with a continued drive for learning.

Technical Skills

Laboratory: Composite Manufacturing Techniques, Instron Tensile Testing, Electronic Instrumentation & Measurement Equipment, GMP, Food Defence Awareness, Materials Characterization

Computer: CAD (SolidWorks, Autodesk Fusion/Inventor, Siemens NX), MATLAB & Simulink, ClickPLC, R, C, C#, Arduino Microcontrollers, Microsoft Office Suite & Excel, LaTeX, Production Tracking System Software

Machinery: FDM 3D Printing, Laser Cutting, Thermoforming, Injection Molding, CNC, Electronics Prototyping Techniques

Certifications: British Columbia Class 7 Driver's License (2026), UBC Introduction to Laboratory Safety (2023), CRC Emergency First Aid & CPR/AED Level C (2025), MATLAB Deep Learning Onramp Course (2025)

Education

University of British Columbia *Expected Graduation: May 2028*

Bachelor of Applied Science – Manufacturing Engineering

Activities: Women in Engineering (WIE), UBC Engineering Ambassador Program, Yoga Club, Delta Gamma Fraternity, UBC Rapid 3D Printing Student Design Team: (Exotic Materials Testing & WebDev Team)

Work Experience

UBC Faculty of Applied Science, UBC Engineering Ambassador *Vancouver, BC | July 2026 – Present*

- Ambassador of the Month (July 2026)
- Present and discuss academic programs and student experience directly with prospective students and families at faculty events and info sessions, adapting communication style to a wide range of audiences.
- Respond to real-time questions via UBC Engineering's online chat platform, actively listening to prospective students' concerns and communicating clear, accurate information to support their decision-making.

PepsiCo Beverages North America, Quality Control Intern *Delta, BC | April 2026 – August 2026*

- Performed daily in-process quality checks across 5 high-volume production lines, verifying compliance with work instructions and product specifications and escalating deviations to supervisors and engineers.
- Analyzed daily production and yield data using a production tracking system and SAP, applying statistical trend analysis to identify defect and cost drivers and support corrective action and continuous improvement, reducing the number of raw product dumps by half across two months through targeted operator training.
- Conducted monthly internal audits, including audits for new material and process implementations, and documented findings in audit summaries and reports for engineering review.
- Produced training materials for machine operators and collaborated cross-functionally with operators, supervisors, and engineers to resolve time-sensitive quality issues.

Conifer Homewares, Production Assistant *Vancouver, BC | August 2025 – December 2025*

- Managed daily production and post-processing of 3D-printed products, troubleshooting hardware and software issues on 48 printers running 24 hrs/day to reduce downtime and waste.
- Tracked output against tight customer schedules and quality requirements for high-profile clients such as MoMA NYC, and coordinated reprocessing of waste filament for recycling.

Geering Up Engineering Outreach, Camps Instructor *Vancouver, BC | June 2025 – August 2025*

- Led 8 unique STEM camps for youth aged 6–18, fostering curiosity and creativity in engineering. Published lesson material including an Arduino programming introduction to suit target age groups and diverse learning styles, ensuring inclusivity and accessibility through educational, safe and fun programming in a team-based environment.

Women in Engineering UBC, External Communications Team *Vancouver, BC | September 2024 – Present*

- Designed weekly high-quality promotional materials for faculty-supported events promoting gender diversity, equity, and inclusion in engineering. Collaborated with internal committees to enhance outreach strategies and event visibility, boosting participation and engagement. Created video-based promotional materials on multiple social media platforms with an awareness of current trends to drive interaction and event attendees.

Technical Projects

3D Printing Exotic Materials Testing *Fall 2024 – Spring 2026*

- Tested exotic filament materials as a member of UBC's Rapid Engineering Design Team, optimizing print parameters and mechanical properties, and authored an independent report on Carbon Fiber filled Nylon filament.
- Tools Used: FDM 3D Printing, CAD (Fusion 360, SolidWorks), Instron Tensile Testing, Mechanical Property & Materials Characterization, Technical Report Writing

Solder Feeding Attachment *Summer 2026 – Present*

- Developing a soldering iron attachment that automatically feeds wire based on finger pressure, enabling precise one-handed soldering across a range of handle grips.
- Tools Used: CAD (Fusion 360/SolidWorks), FDM 3D Printing, Force/Pressure Sensors, Arduino Microcontrollers, Mechanical Design & Prototyping

Keurig Notification Device *Spring 2026*

- Built a microcontroller-based real-time water level detection system that triggers Wi-Fi refill notifications, applying hardware-software integration to solve an everyday problem.
- Tools Used: Raspberry Pi Pico W, Circuit Design, Ultrasonic Sensors, Embedded Systems (C/C++), Python, Wi-Fi/IoT Connectivity

Gesture Controlled Robot *Spring 2026*

- Engineered a differential-drive robot with IMU, IR, proximity, and encoder sensors for autonomous navigation, real-time pose tracking, and BLE-based gesture control between two microcontrollers.
- Tools Used: Arduino, FDM 3D Printing, C++, Circuit Design & Sensors, Python, IMU/Sensor Fusion, BLE Communication, Embedded Systems

Solar Automated Planter *Fall 2019 – Spring 2020*

- Engineered a solar-powered automated plant watering device on a user-set interval, following the full design process from stakeholder consultation through prototyping and final presentation.
- Tools Used: Solar Technology, FDM 3D Printing, CAD, CNC Machining, Microcontroller Programming, Sensor Integration

Awards

- Delta Gamma Lewis Institute Graduate, *2024*
- Arkwright Engineering Scholarship, *2020*
- South Hampstead High School Design & Technology Award, *2020*
- South Hampstead High School Sportswoman of the Year Award, *2020*
- Duke of Edinburgh Silver & Bronze Award, *2019*

Interests & Activities

Professional Affiliations: Engineers & Geoscientists BC (Student Chapter), *2024 – Present*

Languages: Native English, Beginner German

Interests: Product Design, Yoga, Skiing

Volunteering: Vancouver Fashion Week, Imagine Day UBC, Athletic Leadership (Oak Bay High School)
